Personal Portfolio Site: www.migsaenz.com

Objective: Computer Science Graduate with years of experience in information technology, robotics design, user facing artificial intelligence and programming. Seeking a junior position to explore and broaden career opportunities.

Bachelor of Science in Computer Science
California Polytechnic State University: San Luis Obispo

Graduation: June 2025

Employment

AI INTERN HG INSIGHTS (September 2025-Present)

- Created, maintained, monitored and evaluated end-to-end AI agents and metric trackers that interface directly with business docs and pipelines using AWS, Bedrock, Databricks, Datadog, and Terraform among other tools.
- Took the lead on various internal tools including the automation of agent lifecycles and deployment.
- Worked with small and medium sized teams (2-10 members) on Agents that dealt with varying dataset sizes (from 10k to 10 million documents).

UNDERGRADUATE RESEARCH (November 2024-June 2025)

- Improved, containerized, and deployed an application for the development of new mechanical product ideas via the presentation of previous patents and associativity with key ideas and functionality keywords.
- Built support for 15,000+ patents, user definable lenses (currently using 12), and whatever AI agent future developers and deployers would prefer.

SUMMER UNDERGRADUATE RESEARCH PROGRAM (SURP) (June 2024-November 2024)

- Developed a MatLab application that leveraged genetic algorithms to perform tradespace exploration in service of automated and human-in-the-loop team generation for a Mech-Eng Senior Project course.
- Improved algorithmic performance by 200%, expanded dataset handling by 300%

Robotics

CAL POLY ROBOTICS CLUB

Strategy Lead, Network Administrator	24-25 Worlds Division Finalists, Regional Tournament Champions x3 Skills Champions x3 23-24 Worlds Champion Finalists, Regional Tournament Champions x2, Skills Champions x2

Self-Driven Projects

HomeLab/Server (2021-Present)

Created a sandbox environment "HomeLab" (server) for the hosting of files and home media. Used to run virtual machines, and useful docker instances as well as experiment with new applications in a safe environment separate from daily driver systems. This server has also been used to create a unified "coding machine" that hosts all of my relevant environments and code so that I need not worry about versioning, packages, or save states across my various machines.

Portfolio Website (2023-Present)

Created and curated a series of personal websites for the purpose of cataloging projects, research, and other relevant experience, as well as get further practice in the programming and networking components of site creation alike. The current iteration of this website is available at www.migsaenz.com.

Network Management (2021-Present)

I wanted to have perpetual availability of any of my machines, so utilized an interconnect via a personal VPN of all of my systems to ensure I have remote access to any and all of my personal machines. This approach to the management and administration of my own home network also extended to my role as the room officer for the Cal Poly Robotics Club as I had to administer and upkeep all the machines that the CPRC owns or uses.

Skills

Hard Skills: C, Python, Java, MatLab, C++, JavaScript, RISC-V Assembly, ARMV8 Assembly, CUDA, Racket, SQL, CSS, HTML, MongoDB, Systems Integration, Network Management, Hardware Management, SSH, SFTP, Vim, Remote Access, Docker, Hypervisors, VPN, DNS management, Proxying.

Key Coursework: Computer Architecture, Systems Programming, Programming Languages, Artificial Intelligence, Databases, Parallel Computing (GPU Programming), Computer Security and Privacy, Distributed Systems, and Operating Systems
